what are the main processes in elearning

2 minutes ago

The main processes in the e-learning system, as outlined in the context, are:

1. **Prerequisites Setup**: This includes creating courses, quizzes, and cohorts necessary for the e-learning system.

2. **User Registration**: Checking Moodle registration, uploading employee lists, handling unregistered users, and ensuring all users are registered in Moodle.

3. **User Enrolment**: Enrolling users as cohort members, confirming cohort membership, and enrolling cohorts into courses.

4. **Email Setup**: Creating and editing email reminders for courses, setting up final reminders, and viewing/editing email configurations for invitations and user/superior reminders.

5. **Deleting Users from Courses**: Reuploading employee lists, selecting cohorts, and removing users from courses when necessary.
